

CargoGo User Guide - Administrator

1. Login

Opening the following URL, you can log in by entering your account and password.

The access address for CargoGo is: <https://www.cargogo.com/login>

2. Visibility

2.1 Containers

The multi-dimensional inquiry of containers is composed of multiple business scenario views, each view includes business fields and logistics fields, and the data between views is synchronized and updated, which can adapt to the business management needs of different scenarios.

1. Business Fields: The business fields of the tenant, which support customization by the tenant, and the data is provided by the tenant.
2. Logistics Fields: Fields related to the logistics milestones of the container.

2.1.1 Container Subscription and Business Data Entry

1. After subscribing to container data, it can be viewed and supports manual subscription, EXCEL import subscription, and API subscription. The supported subscription conditions are as follows:
 - a. Booking Number + Carrier: You can subscribe to all containers under the booking number.
 - b. Bill of Lading Number + Carrier: You can subscribe to all containers under the bill of lading number.
 - c. Container Number + Carrier + ETD: Subscribe to containers where the business occurrence times for empty pick-up, heavy return, loading, and departure from port are within the time range of (ETD + 30 days, ETD).
 - d. Booking Number/Bill of Lading Number + Carrier + Container Number: You can subscribe to a specific container under a booking number/bill of lading number.
2. When subscribing to a container, business data entry is supported.

2.1.1.1 Manual Subscription

Manually enter subscription and business information for subscription.

1. Click on "Subscribe" to open the subscription panel. When subscribing, enter the relevant business field information.

2.1.1.3 View Subscription Results

1. Open the "Import Records" page to view the import results. If there are any failed import records, you can click "Download Failed Records" to download the data that failed to import.

2.1.1.4 View Subscription Results

The data after subscription can be viewed in the "View/Container Subscription" page.

1. The "View" > Container page displays the containers, with the following tracking statuses:
 - **In Transit:** Containers that are successfully tracked and the business has not been completed.
 - **Completed:** Containers that are successfully tracked and the business has been completed.
 - **Tracking:** Containers that are currently being tracked.
 - **Tracking Failed:** the tracking of the containers failed. There are several possible reasons, including:

- The shipping company has not provided data within 14 days after the subscription.
- The subscribed bill of lading number / booking number / container number is incorrect.
- The subscribed bill of lading number / booking number / container number does not match the carrier.

1. **Service Center > Usage Logs > Container Subscription** displays the data and subscription status of the subscribed containers:

- **Subscribing:** The subscription was successful, and the data is being tracked.
- **Subscription Successful:** Data has been successfully tracked.
- **Subscription Failed:** No data was tracked. There are several possible reasons, including:
 - The shipping company has not provided data within 14 days after the subscription.
 - The subscribed bill of lading number / booking number / container number is incorrect.
 - The subscribed bill of lading number / booking number / container number does not match the carrier.

2.1.2 Bulk Business Data Update

2.1.2.1 Bind Business Data at Subscription

Support binding business data at the time of subscription. For details refer to **Container Subscription**.

2.1.2.2 Import to Update Business Data

2.1.2.2 Import to Update Business Data

1. Select Data: Use the filter function to select the containers that need to be bound/updated with business data. After selecting, click the "Update" button to open the business data update panel.

2. Download Template: Download the template for data updating. The template contains the IDs, booking numbers/bill of lading numbers, container numbers, and business fields that need to be updated.

In Transit: 2 Complete: 112

1. Click anywhere outside the cell to save the modified data.

2.1.3 Container Data Permissions

The data in the container multidimensional query can be configured using row and column permissions. After configuration, when users access the container page, they will only be able to see the data they are authorized to view.

2.1.3.1 Column Permissions

Column permissions are the fields and columns visible to users on the container page. Logistics fields are visible to all users by default, while business data fields can be configured based on roles.

1. **Create/Edit Role:** Administrators can open the role editing panel by using the "Create" or "Edit" role function under "System Management / Role Management".
2. **Select Fields:** After selecting "Container" under the "Menu and Button Operation Permissions" section, click "Field Permissions" and check the fields that the role is authorized to view/edit. This completes the configuration of the container field column permissions.

2.1.3.2 Row Permissions

Users can view the data set on the container page, and row permissions can be configured based on user settings. If additional data permission fields are required, please contact the support personnel of Cargogo.

1. **Create/Edit User:** Administrators can open the user information panel by using the "Create/Edit" user functionality in the "System Management/User Management" section.
2. **Set Data Permissions:** In the "Set Multi-dimensional Query Data Field Permissions" section, select a field and set the parameters to complete the configuration of row permissions for container data.

2.1.4 Manage Views

Composed of My Views and View Templates.

2.1.4.1 My Views

Displays all created views, supporting the functions of viewing, editing, copying, and deleting views.

1. **View:** Click on the view name to locate the created view.

2. Edit: Click on "Edit" to open the view editing panel, which supports editing the view name, display fields, data-driven conditions, and data sorting.
3. Copy: Click on "Copy" to copy the view. The fields displayed, data-driven conditions, and data sorting will be consistent with the current view. Simply enter a view name to successfully copy the view.
4. Delete: Click on "Delete" to remove the current view.

2.1.4.2 View Templates

CargoGo demonstrates recommended data view templates, based on which user can create views they need.

1. Data-Driven Conditions of View Template: Hover over the template to view the data-driven conditions.

2. **Template Preview:** Click on the template to create a view. The view will display data based on the display fields, driving conditions, and sorting rules set by the template.

2.1.5 View Creation and Editing

2.1.5.1 Create View

Users create new views based on business scenarios.

1. Click the create view icon to open the view creation panel.

2. **Enter Creation Conditions:** Users can set custom view names, field displays, data filtering, and view access:
- a. **View Name:** You can customize the name of the view;
 - b. **Field Display:** The fields that are checked will be displayed in the newly created view, while those that are not checked will not be displayed;

- c. Data Filtering: You can set conditions on the selected fields to filter data that meets the requirements.

3. Click the "Create" button to create the view.

2.1.5.2 Edit Views

1. Click the "Edit" button to open the edit view panel.

2. Edit the fields, filters, and sorting rules of the view. The specific operation is the same as creating a view.

2.1.5.4 Delete View

Delete View: Click the delete button to remove the newly created view.

2.1.6 View Data Query and Visualization

2.1.6.1 Field Descriptions

2.1.6.1.1 Business Field Description

Business fields support addition, editing, and adjustment of the default display order, for details refer to section 5.3.2 Container Configuration.

2.1.6.1.2 Logistics Field Description

The logistics fields on the container page are described as follows:

Field Name (English)	Field Name (Chinese)	Field Type	Defination
Booking No B/L	订舱号/提单号	Text	The main conditions of the subscription provided by the user, which could be the booking number or bill of lading number, corresponding to multiple container numbers.
Ctn No	集装箱号	Text	Container numbers provided by the user or returned via the miletone dynamic interface.
Carrier	承运人	Text	Abbreviated name of the shipping company (Carrier).
SCAC	SCAC	Text	The SCAC code corresponding to the shipping company.
Subscription Time	订阅时间	Time	The time when the user subscribes to data via the subscription endpoint.
Status	数据跟踪状态	Enumeration	Tracking status of data includes: Pending: Data is currently being tracked. Failed: Data tracking failed. InTransit: Tracking successful, the business for the container is still ongoing. Complete: Tracking successful, the business for the container is completed.
Latest Status	最新状态	枚举	Latest Transportation Status of Container: • NotEmptyOut: Empty Container has not been picked. • EmptyOut: Empty Container has been picked. • In-Gate (POL): Container is still loaded at the Port of Loading (POL). • LoadedOnVessel (POL): Container loaded on the vessel at the Port of Loading (POL). • ATD (POL): Vessel has departed from the Port of Loading (POL). • ATA (POD): Vessel has arrived at the Port of Discharge (POD). • UnloadFromVessel (POD): Container unloaded from vessel at the Port of Discharge (POD). • Rail-ATD: Cargo loaded onto the train or the train has departed. • Rail-ATA: Train has arrived or cargo has been unloaded from the train.

			• Out-Gate: Heavy Container has been picked. • EmptyReturn: Empty container has been returned.
Actions	船期链接	Link	If a container Vessel Schedule product is activated, clicking this link will redirect to the Vessel Schedule page to view the data.
Needs Attention	异常	Enumeration	Exception Information: If the alert has been activated, this field will display exception alert: • ArrivalDelayed(POL): The first-leg vessel's arrival at the Port of Loading (POL) is delayed. • DepartureDelayed(POL): The first-leg vessel's departure from the Port of Loading (POL) is delayed. • NotBoarded(POL): The container has not been loaded onto the vessel at the Port of Loading (POL). • ArrivalDelayed(1st): The first-leg vessel's arrival at the transshipment port is delayed. • DepartureDelayed(2nd): The second-leg vessel's departure from the transshipment port is delayed. • NotBoarded(POT): The container was not loaded at the transshipment port. • SpeedChange: Speed change of the vessel. • AreaMonitoring: Area monitoring. • Typhoon: Typhoon alert. • ArrivalDelayed(POD): The transportation has exceeded the estimated time of arrival at the Port of Discharge (POD). • Demurrage(POD): Demurrage at the Port of Discharge (POD). • Unreturned: Empty container not returned.
Area Monitoring	区域监控	Enumeration	Area Name
Typhoon Name	台风	Enumeration	Typhoon Name
Empty Out	提空	Time	Empty Pick-up
In-Gate (POL)	起运港还重	Time	Heavy Return at Port of Loading (POL)
POL	起运港	Text	Name of Port of Loading

Loaded on Vessel (POL)	起运港装船	Time	Vessel Loading Time at Port of Loading
1st Vessel/Voyage	首程船/航次	Text	Vessel Name and Voyage Number of First Leg
ETD (POL)	起运港ETD	Time	Estimated Time of Departure at Port of Loading
ATD (POL)	起运港ATD	Time	Actual Time of Departure at Port of Loading
POT(1st) ETA	第1个中转港ETA	Time	Estimated Time of Arrival at First Port of Transshipment
POT(1st)ATA	第1个中转港ATA	Time	Actual Time of Arrival at First Port of Transshipment
POT (1st)	第1个中转港	Text	Name of First Port of Transshipment
Veseel/Voyage (2nd)	二程船	Text	Vessel Name and Voyage Number of Second Leg
POT(1st) ETD	第1个中转港ETD	Time	Estimated Time of Departure at First Port of Transshipment
POT(1st)ATD	第1个中转港ATD	Time	Actual Time of Departure at First Port of Transshipment
POT(last) ETA	最后一个中转港ETA	Time	Estimated Time of Arrival at Last Port of Transshipment
POT(last)ATA	最后一个中转港ATA	Time	Actual Time of Arrival at Last Port of Transshipment
POT (last)	最后一个中转港	Text	Name Last Port of Transshipment
Veseel/Voyage (Last)	最后一程船	Text	Vessel Name and Voyage Number of Last Leg
POT(last) ETD	最后一个中转港ETD	Time	Estimated Time of Departure (ETD) at Last Port Transshipment (LPT)
POT(last)ATD	最后一个中转港ATD	Time	Actual Time of Departure (ATD) at Last Port Transshipment (LPT)
POD	卸货港	Text	Name of Port of Discharge (POD)
PTA (POD)	卸货港PTA	Time	

			Planned Time of Arrival (PTA) of the vessel at Port of Discharge (POD) on the day of departure
ETA (POD)	卸货港ETA	Time	Estimated Time of Arrival at Port of Discharge
Predicted ETA	预测ETA	Time	ETA Caculated by CargoGo
ETA Changed (Last 24H)	ETA更新 (24小时内)	Enumeration	Within 24 Hours, ETA Change at Port of Discharge: • Yes: ETA has changed. • No: ETA has not changed.
ATA (POD)	卸货港ATA	Time	Actual Time of Arrival at Port of Discharge
POD OTP	卸货港准时表现 POD on time performance	Enumeration	Compare the difference between ATA(POD) and PTA(POD) to assess the on-time performance of ocean transport: • Early: $ATA(POD) - PTA(POD) < -24 \text{ hours } (-1 \text{ day})$. • On Time: $-24 \text{ hours} \leq ATA(POD) - PTA(POD) < 24 \text{ hours } (+1 \text{ day})$. • Late: $ATA(POD) - PTA(POD) \geq +1 \text{ day}$. • Unknown: ATA(POD) or PTA(POD) is empty, unable to calculate.
Unload from Vessel (POD)	卸货港卸船	Time	Unloading Time at Port of Discharge
Rail load	装火车	Time	Train Loading Time at Port of Discharge
Rail ETD	火车预计离	Time	Train Estimated Time of Departure from Port of Discharge
Rail ATD	火车离	Time	Train Actual Time of Departure from Port of Discharge
Rail ETA	火车预计到	Time	Train Estimated Time of Arrival at Destination
Rail ATA	火车到	Time	Train Actual Time of Arrival at Destination
Rail Unload	卸火车	Time	Unloading Time at Destination
FND	目的地	Text	Name of Destination
FND ETA	目的地预计到达时间	Time	Estimated Time of Arrival at Destination
FND ATA	目的地实际到达时间	Time	Actual Time of Arrival at Destination
Out-Gate	提重	Time	Heavy Pick-up Time at Port of Discharge / Destination

Empty Return	实际还空	Time	Time of Empty Return
Container Dwell Days(POD)	等待提重时长	Number	Container's Stay Duration at Port of Discharge after Unloading (in days)
Container Usage Days	等待还空时长	Number	Duration After Heavy Container Retrieval Until Empty Container Return

Consignee ID	Note	Carrier	Subscription Time	Status	Latest Status	Empty Out	In-Gate (POL)	POL	Loaded on Vessel (POL)	ATD (POL)	POD	ATA (POD)	Unload from Vessel (POD)	Out-Gate

MSK	2024-12-30 06:00:00	InTransit	LoadedOnVessel (POL)	...

2. You can select fields in the view to set sorting conditions:

- 1) **Text fields:** For example, business fields, bill of lading numbers, container numbers, etc. These fields support sorting in ascending or descending alphabetical order.
- 2) **Enumeration fields:** For example, Carrier, SCAC, Latest Status fields. These fields support sorting in ascending or descending order based on the option sequence.
- 3) **Time fields:** For example, Subscription Time, Empty Out, and other 7 key logistics milestone fields. These fields support sorting in chronological order or reverse chronological order.

Ctn: 2192

2. The dashboard displays the cargo currently in transit. The yellow triangle represents the vessel, and the map shows the real-time location of the cargo on the vessel, as well as the number of containers on board. The blue dot represents the port, and the map displays the land-based cargo data.

3. Click on the vessel to view the the data of the container on board.

4. Click on the port to view the land-based container data.

1) **Import:** The number of containers expected to arrive at the port, awaiting pickup, awaiting return empty, and in transit is counted from the perspective of the unloading port. The containers expected to arrive at the port will display the current vessel location and the estimated route.

2) **Export:** From the perspective of the port of loading, the number of containers awaiting return (empty) and awaiting loading onto ships is counted.

2.1.6.5.2 Tracking Results

Click on the booking number, bill of lading number, or container number to open the visual tracking results page.

2.1.6.5.3 Port View Details

By clicking on the discharge port, the Port Perspective Dashboard can be opened. The Port Perspective Dashboard only supports viewing containers currently on land or containers expected to arrive at the discharge port within the next 7 days. For more details on the port perspective, please refer to the "View Containers by Port" section in the Cargo Dashboard.

2.1.6.5.4 Dashboard

2.1.6.5.4.1 Summary Statistics

Based on four dimensions: container, order, SKU, and risk, the system summarizes the number of in-transit and completed containers.

- Containers:** The total number of containers in the view is counted according to the **Ctn No** field, including containers in transit and completed containers.
- Orders:** The total number of orders in the view is counted according to the **Order** field, including orders in transit and completed orders. When a row contains multiple orders, it counts as one order.
 - In-transit orders:** An order is considered in transit if at least one container under the order is in transit.
 - Completed orders:** An order is considered completed if all containers under the order are in a completed state.
- SKU:** The total number of SKUs in the view is counted according to the **SKU** field, including in-transit and completed SKUs. When a row contains multiple SKUs, it counts as one SKU.
 - In-transit SKU:** An SKU is considered in transit if at least one container under the SKU is in transit.
 - Completed SKU:** An SKU is considered completed if all containers under the SKU are in a completed state.
- Risk:** The total number of risks in the view is counted according to the **Risk** field, including in-transit container risks and completed container risks. When a row contains multiple risks, it counts as one risk.
 - In-transit container risks:** Counted by container.

b. **Completed container risks:** Counted by container.

2.1.6.5.4.2 Map Dashboard

Based on the number of containers in view, the following indicators are used to summarize container quantities, with the option to click for detailed data on each indicator.

1. **In-Transit Overview:** Based on the **latest status** field of containers, the number of containers in each key status is counted to reflect the transportation status of containers with ongoing business.
 - a. **Empty Picked:** Container has been emptied.
 - b. **Loaded for Return:** Container has arrived at the port of loading.
 - c. **Departed:** Container has left the port of Loading.
 - d. **Arrived:** Container has arrived at the port of discharge.
 - e. **Discharged:** Container has been unloaded at the port of discharge.
 - f. **Loaded for Delivery:** Container has left the port of discharge/destination.
2. **Map:** Same as the **In-Transit Dashboard**.

2.1.6.5.4.3 Containers to Monitor

After configuring the fields, the statistical values will be displayed.

Containers Need Attention

Unreturned	299
ArrivalDelayed(POD)	314
PortJam	567
AreaMinitoring	179
Demurrage(POD)	132
SpeedChange	266

2.1.6.5.4.4 Statistical Indicator Descriptions

1. **Expected Departing Container Volume - Port:** Based on the **POL** field (Port of Loading), the number of containers expected to depart from the port in the next 7 days (ETD at POL) is counted. The default display shows the top 10 ports ranked by container volume.

2. **Expected Departing Container Volume - Shipping Factory:** Based on the **Production Factory** field, the number of containers expected to depart from the port in the next 7 days (ETD at POL) is counted. The default display shows the top 10 shipping factories ranked by container volume.

3. **Expected Arriving Container Volume:** Based on the **ETA (POD)** field (Port of Discharge expected arrival time), the containers are counted in three categories: those with an ETA (POD) within the next 7 days, those with an ETA (POD) beyond the next 7 days, and those with an ETA (POD) earlier than today but still have not yet arrived at the port of discharge.

4. **Expected Arriving Container Volume - Arrival Date:** Based on the **ETA (POD)** field (Port of Discharge expected arrival time), the number of containers expected to arrive at the port of discharge within the next 7 days is counted, broken down by the estimated arrival date for each day.

5. **Expected Arriving Container Volume - Port:** Based on the **POD** field (Port of Discharge), the number of containers expected to arrive at the port of discharge in the next 7 days (ETA at POD) is counted. The default display shows the top 10 ports ranked by container volume.

6. **Expected Arriving Container Volume - Consignee:** Based on the **Consignee ID** field, the number of containers expected to arrive at the port of discharge in the next 7 days (ETA at POD) is counted. The default display shows the top 10 consignees ranked by container volume.

7. **Container Waiting for Out-Gate - Port:** Based on the **Latest Status** field of the container (set to "Unload from Vessel"), the number of containers is counted for the top 10 ports, as well as the distribution range of the waiting time for heavy lift after unloading at these ports. The waiting time is calculated as the current time minus the unloading time.

8. **Container Waiting for Out-Gate - Consignee:** Based on the **Latest Status** field of the container (set to "Unload from Vessel"), the number of containers is counted for the top 10 consignees, as well as the distribution range of the waiting time for heavy lift after unloading for these consignees. The waiting time is calculated as the current time minus the unloading time.

9. **Container Waiting for Empty Return - Carrier:** Based on the **Latest Status** field of the container (set to "Out Gate"), the number of containers is counted for the top 10 carriers.

10. **Container Waiting for Empty Return - Consignee:** Based on the **Latest Status** field of the container (set to "Out Gate"), the number of containers is counted for the top 10 consignees.

2.1.6.7 Hide Rows

After a container is dropped during the transportation process, the data will no longer be updated. Additionally, there may be data related to operational errors or split bills. If you do not wish to display such data on the container page, you can hide the row using the "Hide Row" function. Once hidden, the data will no longer appear on the container page, making it invisible to all users. If the data was hidden due to an operation error, you can restore its visibility by "Unhiding."

2.1.6.7.1 Hide Data

1. Use filter conditions to query the data that needs to be hidden.

- [illegible]

1. By clicking on the "Unhide" text in the hidden data push panel, you can open the list of hidden containers. Alternatively, you can also access it via the menu: **Service Center > Configuration > Hidden Containers**.

2.1.7 Data Export

1. **Filter the data to be exported:** Click on "Filter" to open the filter panel and set the filtering conditions.

The screenshot shows the 'Container' management interface. A filter panel is open, allowing users to filter data by fields. The panel includes a search bar, a 'Filter by fields' section with 'choose field' dropdowns, and a 'Match' dropdown set to 'All'. Below the filter panel, a table displays container data with columns: BookingNo B/L, Ctn No, Carrier, Subscription Time, Status, Latest Status, Empty Out, In-Gate (POL), POL, Loaded on Vessel (POL), Vessel/Voyage(1st), and ATD (POL). The table lists several containers, including KMTCSHAM802983, NOSZP24TK56909, NSSLADLC24G00230, SITGLYBU303514, MEDUYR111129, and 247434325. The bottom of the interface shows a summary: 'In Transit: 2004 Complete: 23169'.

2. 点击导出按钮，打开导出面板

The screenshot shows the 'Container' management interface with the 'Export' button highlighted in a red box. The interface includes a top navigation bar with 'Visibility / Container' and a sidebar with various icons. The main area displays a table of container data with columns: BookingNo B/L, Ctn No, Carrier, Subscription Time, Status, Latest Status, Empty Out, In-Gate (POL), POL, Loaded on Vessel (POL), Vessel/Voyage(1st), and ATD (POL). The table lists several containers, including KMTCSHAM802983, NOSZP24TK56909, NSSLADLC24G00230, SITGLYBU303514, MEDUYR111129, and 247434325. The bottom of the interface shows a summary: 'In Transit: 2004 Complete: 23169'.

3. Click the button “export” on the panel to generate the export file.

4. When the file status changes to "Completed," it will be available for download.

2.1.8 View Notification

The view allows users to set up email notifications, supporting automatic monitoring of data changes in the view and sending reminders. When the data in the view triggers a related event, the triggered data will be sent to the user via email at a specified time.

Since containers support creating data views for different scenarios, the combination of views and notifications enables diverse reminders, such as:

- **Empty Return Reminder:** Create an empty return view, set up a data change notification, and select the event for data increase. After saving the settings, a reminder will be sent daily when the container's empty return milestone updates.

- **ETA Change (24 Hours) Reminder:** Create an ETA change (24-hour) view through the view template in the view management, set up a data change notification, and select the event for data increase. After saving the settings, a reminder will be sent daily when the container's empty return milestone updates.

2.1.8.1 Event Trigger Notification

Once the data in view triggers the setup, email reminders can be sent at 9:00 AM the next day (UTC+8). The view supports three types of event trigger notifications:

- **[Latest Status] Updated to [ATA (POD)]:** By 9:00 AM the next day, if the container's latest status changes to "Arrived at Port," it means the vessel carrying the container has arrived at the discharge port.
- **[Latest Status] Updated to [ATD (POL)]:** By 9:00 AM the next day, if the container's latest status changes to "Departed from Port," it means the vessel carrying the container has left the port of loading.
- **[ETA (POD)] Within the Next 7 Days:** By 9:00 AM the next day, it refers to containers expected to arrive at the discharge port within the next 7 days.

The following is the notification setup process:

1. Select the view for which you need to set up event trigger notifications and click **Notification** to open the email notification panel.

5. Click **Save and Apply** to successfully create the notification.

2.1.8.2 Data Change Notifications

When the data in the view changes, email reminders can be sent at 9:00 AM the next day (UTC+8). The view supports three types of event trigger notifications:

- **View Data Increase:** If the view data at 9:00 AM today is compared with the data at 9:00 AM yesterday, and the data has increased, a reminder will be sent. This means that after the data is updated, if it meets the current view's conditions, it will be automatically added to the view. An email will notify the user about the new data.
- **View Data Decrease:** If the view data at 9:00 AM today is compared with the data at 9:00 AM yesterday, and the data has decreased, a reminder will be sent. This means that after the data is updated, if it no longer meets the current view's conditions, it will be automatically removed from the view. An email will notify the user about the removed data.

The following is the notification setup process:

1. Select the view for which you need to set up event trigger notifications and click **Notification** to open the email notification panel.

3.2 Business Configuration

3.2.1 Email Configuration

1. Supports configuring the email logo and signature. After successful configuration, the container view emails will use the configured content.

The screenshot shows the CargoGo web application interface for email configuration. The top navigation bar includes the CargoGo logo and a breadcrumb trail: Service Center / Biz Config / Email config. A sidebar on the left lists various menu items: Visibility, Schedule, Analytics, Basic Information, Service Center (expanded), Service Report, API Preview, Usage Record, Reminder Settings, Biz Config (expanded), Email config (selected), Container Config, Hidden Container, Systems, and Laboratory. The main content area has a tabbed interface with tabs for Container Config, Ocean Shipment, Container, Service Report, Hidden Container, and Email config. The Email config tab is active, showing a 'Logo and signature' section. The 'Logo' field contains the text 'CargoGo'. The 'Signature' field is a rich text editor with a toolbar containing icons for undo, redo, bold, italic, underline, link, unlink, bulleted list, numbered list, indent, outdent, and quote. The text area of the signature editor contains the placeholder 'Please enter a signature.'. At the bottom of the form are three buttons: 'Reset', 'Preview', and 'Save'.

3.2.2 Container Configuration

The container business fields support adding, editing, and adjusting the order.

3.2.2.1 Add Business Fields

1. Click "Add" to open the "Add Field" page.

2. Edit Field Information. The following content can be edited:

Field	Description
Usage Status	Field Usage Status: Enabled: The field is in active use. Disabled: The field will no longer be displayed in query results after being disabled.
Support Sharing	Support Sharing: Yes (Can Share): The field will be visible on the page opened from the waybill shared via email. No (Cannot Share): The field will not be displayed on the page opened from the waybill shared via email.
Field Name (Page)	The name of the business field displayed on the container page.
Field Name (API)	The name of the business field in the subscription or update interface.
Field Description	A brief description of the field.
Field Type	The field types are: Text, Time, Enum, and Number.
Type Explanation	Field Type Text: Supports up to 200 characters. Time: Time format is yyyy-mm-dd hh:mm:ss.

	• Enum: Can add enumerated values. • Number: Supports Arabic numerals.
Role Permissions	A collection of roles that have permission to view the field in the container page.

3. Click "Save" to save successfully.

3.2.2.2 Edit Business Field

1. Click "Edit" to open the edit page.

2. The editable content for the field is as follows:

Field	Description
Usage Status	Field Usage Status: Enabled: The field is actively in use. Disabled: The field will no longer be displayed in queries when disabled.
Supports Sharing	Supports Sharing to Other Users: Yes (Shareable): The field will be visible on the page when the Bill of Lading (B/L) is shared via email. No (Non-shareable): The field will not be visible on the page when the B/L is shared via email.
Field Name (Page)	The name of the business field displayed on the container page.
Field Description	A description of the field.
Field Type	Enumeration
Type Explanation	Enumeration: New enumeration values can be added.
Role Permissions	The roles that have permission to view the field on the container page.

3.2.2.3 Adjust Business Field Order

1. Click the **Adjust Order** button to open the **Adjust Order** screen.

2. Drag and drop the fields to adjust the default display order of the business fields.

3. After making adjustments, click "Save" to update the default display order of the business fields for the tenant.

3.2.3 Hide Containers

1. To display hidden containers, you can individually or in bulk cancel the hiding.

4. System Management

4.1 1-Minute Guide to CargoGo

4.1.1 How to Set a Password

4.1.1.1 Set Password

After the tenant administrator activates an employee's account, the system will send the randomly assigned initial password to the employee's phone or email. Upon the first login, the employee will need to "reset the password." The password reset process can be completed by following the instructions provided by the system.

4.1.1.2 Forgot Password

If you forget your password, you can reset it using the following methods:

- If not logged in, click "Forgot Password" on the login page and receive a verification code via phone or email to reset the password.

- When logged in, click "Reset Password" in the dropdown menu under the logged-in account in the top-right corner of the page. A verification code will be sent via phone or email to reset the password.

The image shows a 'Reset password' dialog box with a close button (X) in the top right corner. It features a progress bar with two steps: '1 Password verification' (active) and '2 Reset password'. Under step 1, there is a phone number input field showing '+86 13842086015' with a green checkmark to its right. Below this is a text input field for the 'Sms verification code' and a blue button labeled 'Get verification c...'. A link 'Switch email verification' is positioned below the code field. At the bottom is a large blue button labeled 'Next step'.

4.1.2 How to Switch Enterprise Identity

If you are an administrator or employee for multiple tenants, you can click the "Switch Identity" option in the dropdown menu under the logged-in account in the top-right corner of the page to open the panel.

Check the "Tenant Name" and click "Confirm" to enter the enterprise tenant dashboard.

The system will automatically record your selected identity information. Next time you log in, it will default to the product you selected last time.

4.1.3 How to Switch Language

Click the "Switch Language" icon in the top-right corner of the page to change the display language. After clicking, the interface will switch to the selected language.

The system will automatically record the language switch information. The next time you log in on the same computer, the system will default to the language you selected last time.

4.2 Administrator Zone

This section allows for unified system functionality settings for the tenant and management of the tenant's organization, roles, and users.

4.2.1 How to Become a Super Administrator

To become a super administrator of the tenant, there are two ways:

1. If your company has not yet registered for a tenant, you need to contact CargoGo staff to open it. The CargoGo staff will set you as the super administrator.
2. If your company has already registered a tenant, you need to contact the super administrator of the tenant, who will assign you appropriate permissions.

4.2.2 What Can a Super Administrator Do

The super administrator is the highest-level system administrator within the tenant and can manage the tenant's organizational structure, roles, employees, assign accounts, and set permissions for employees.

4.2.2.1 Manage Organizational Structure (Pre-configured content, not yet effective)

View the organization department or subsidiary company information of the tenant.

Click the "Add" button to add a department or subsidiary.

New

* Superior:

Please select

* Type:

☒ Department ☐ Enterprise

* Organization:

Please enter

Cancel

Sure

- Note:
- 1. A department with users cannot be deleted. If you need to delete a department, you must first go to "System Management/User Management" and move the users in that department to other departments.
 - 2. Once the parent miletone of a department is created, it cannot be modified. However, you can adjust the organizational structure by modifying the miletone name in the edit page.

4.2.2.2 Manage Roles and Menus

View all the roles added to the tenant. Click the "Add" button to create a new role, and you can assign platform menus and operation button permissions to that role.

Systems / Roles

Organizations Roles

Role: Reset Search

A role cannot be deleted until there is no user under it; if you want to delete a role, you must first remove the user under the role in "user management"; administrator and staff are the system's default roles and cannot be edited or deleted.

4.2.3 Permission Rules Explanation

4.2.3.1 Super Administrator

1. Login to view the full menu granted to the tenant by CargoGo staff.
2. In "System Management / Role Management / Add", view the full menu for the tenant.
3. In "System Management / Role Management", when creating a new role, check menu permissions for that role, and assign permissions from a subset of the full menu available to the tenant.
4. In "System Management / Organization Management", maintain the tenant's organizational structure.
5. In "System Management / User Management", add users and set their permissions:
 - a. Check roles to grant the user the combined menu permissions of the selected roles.
 - b. Check the affiliated organization to grant the user access to data within the menu of the selected roles, based on the organization's permissions.
 - c. Check data permissions (reserved feature, not yet activated).
 - i. 选择仅个人，则在所选角色的菜单下，仅能管理个人创建的数据；
 - ii. 选择指定组织，则在所选角色的菜单下，能管理指定组织的数据（指定组织，只能在已选归属组织范围内勾选）；
 - iii. 选择全部，则在所选角色的菜单下，能管理全部归属组织的数据（全部，指已选归属组织的全部，不是组织结构树的全部）。

- d. Set multi-dimensional query data permissions. For details, refer to the description of data permissions based on user binding in the Container Visualization section.

4.2.3.2 Other Users

1. Login to view the menus enabled by the super administrator, with permissions based on the assigned roles.
2. When disabled by the tenant, the user cannot access the tenant.

4.2.4 System Logs

4.2.4.1 Import Records

Displays the import result records for historical sea freight subscription information. You can click "Download Failed Records" to download the data that failed to import.
